

# GAMEKEEPER 16U

Counter-UAS Radar

## Holographic Radar. See everything, all of the time.

The Gamekeeper 16U radar is able to detect, track and classify small Unmanned Air Systems (sUAS) in 3 dimensions to a range of 7.5km. Unlike conventional scanning radars, the Gamekeeper has no moving parts and instead continuously “floodlights” the entire field of view. Using an array of fixed staring receivers, a 3D image of the environment is formed. This allows the 3D location and velocity of every detected object to be provided. Powerful algorithms distinguish targets of interest from background clutter and classify them as UAS or other targets. As a software defined radar, Gamekeeper can quickly be adapted to deal with new environments and target types.

Unique Holographic Radar designed specifically for detection of small UAS

Tracking in 3 dimensions allows target threat assessment and cueing of other sensors or countermeasures

Detection at long range (7.5km) giving early warning and reaction time

Automatic classification separates UAS from other road, air and sea targets, including birds

# GAMEKEEPER 16U

Counter-UAS Radar

## COVERAGE

Range	7.5km
Azimuth	90°
Elevation	30°
Max Altitude	900m

## PERFORMANCE

Target Size	0.01m <sup>2</sup> Radar Cross Section @ 5km range
Classification	UAS, Other Airborne, Ground Vehicle
Update Rate	4x/sec

## TRANSMISSION

Frequency	L-Band
Peak Power	2kW

## DATA OUTPUT

Format	Asterix Cat 48 (including target classification field)
--------	--

## FUTURE-PROOF TECHNOLOGY

UAS design and technology is changing rapidly. Gamekeeper is a software defined radar. As UAS change, the software in deployed Gamekeeper units can be updated with new algorithms and features developed by Aveillant.

## REAL-TIME OUTPUT

Gamekeeper's high speed update rate (4x per second) provides live output, enabling an operator to observe target behaviour. Standard data output format ensures compatibility and integration with additional sensors, countermeasures and C2 systems.

## LOW MAINTENANCE

Gamekeeper has no moving parts minimising maintenance and operating costs, and simplifying installation. Aveillant can provide remote monitoring and maintenance, along with regular software updates, maximising system availability.

## 3D TRACKING

Left and below:  
3D tracks of small commercial UAS from Gamekeeper in Monaco
